

BREADTH-FIRST SEARCH

CSE 511A: Introduction to Artificial Intelligence

Some content and images are from slides created by Dan Klein and Pieter Abbeel for CS188 Intro to AI at UC Berkeley.
All CS188 materials are available at <http://ai.berkeley.edu>.

UNINFORMED SEARCH

Generic uninformed search pseudo-code:

- (1) Start with a tree that contains only the start state
- (2) Pick an unexpanded fringe node n
- (3) If fringe node n represents a goal state, then stop
- (4) Expand fringe node n^*
- (5) Go to (2)

*generate neighboring nodes that aren't ancestors

BREADTH-FIRST SEARCH

Breadth-first search pseudo-code:

- (1) Start with a tree that contains only the start state
- (2) Pick an unexpanded fringe node n **with the smallest depth**
- (3) If fringe node n represents a goal state, then stop
- (4) Expand fringe node n^*
- (5) Go to (2)

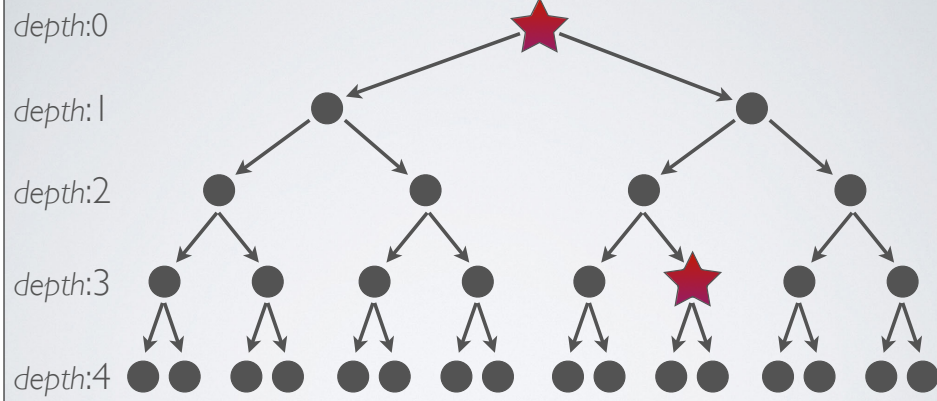

*generate neighboring nodes that aren't ancestors

PROPERTIES

	BFS
Correct the solution it finds is optimal	Yes if cost is uniform
Complete it terminates	Yes if b is finite
Space Complexity max nodes in memory	$O(b^{d+1})$
Time Complexity max nodes generated	$O(b^{d+1})$

branching factor b
depth of the goal d
depth of tree m

PROPERTIES
