

RESOLUTION AND FORWARD CHAINING

CSE 511A: Introduction to Artificial Intelligence

1

INFERENCE ALGORITHMS

Generally, four ways to check for entailment:

- Brute-force model checking
- Resolution
- Forward chaining
- Backward chaining

2

NORMAL FORMS

- Disjunctive normal form (DNF):
 - Disjunction of conjuncts: e.g., $(\neg P \wedge Q) \vee (\neg R \wedge \neg S \wedge T)$
- Conjunctive normal form (CNF):
 - Conjunction of disjuncts: e.g., $(\neg P \vee Q) \wedge (\neg R \vee \neg S \vee T)$
- Horn form:
 - Conjunction of *Horn clauses* (clauses with 0 or 1 positive literal):
e.g., $(\neg P \vee Q) \wedge (\neg R \vee \neg S \vee T)$
 - Often written as set of implications: e.g., $(P \Rightarrow Q) \wedge ((R \wedge S) \Rightarrow T)$

3

MODUS PONENS

$(P \vee Q) \wedge (\neg Q \vee R)$ entails $(P \vee R)$

If Q is true, then R must be true.

If Q is false, then P must be true.

Thus, $(P \vee R)$ must be true.

4

RESOLUTION

- High-level idea of inference by resolution:
 - Proof by contradiction
 - Instead of showing that a KB entails a query, we show that if
 - (1) we include the *negation* of the query in the KB, and
 - (2) prove that the KB is *unsatisfiable*, then
 - (3) the query must be true

5

ENTAILMENT

H	T	IW	UL	$H \Rightarrow IW$	$T \Rightarrow UL$	$H \Leftrightarrow \neg T$	$IW \Leftrightarrow UL$
T	T	T	T	T	T	F	T
T	T	T	F	T	F	F	F
T	T	F	T	F	T	F	T
T	T	F	F	F	F	F	F
T	F	T	T	T	T	T	T
T	F	T	F	T	F	T	F
T	F	F	T	F	T	T	T
T	F	F	F	F	F	T	F
F	T	T	T	T	T	F	F
F	T	T	F	T	F	T	T
F	T	F	T	T	T	F	F
F	T	F	F	T	F	T	T
F	F	T	T	T	T	F	T
F	F	T	F	T	F	F	F
F	F	F	T	T	T	F	F
F	F	F	F	T	T	F	T

IW is true for every model where the KB is true

6

RESOLUTION

KB:

$H \Rightarrow IW$ $T \Rightarrow UL$ $H \Leftrightarrow \neg T$ $IW \Leftrightarrow UL$
 $\neg H \vee IW$ $\neg T \vee UL$ $T \vee H$ $\neg H \vee \neg T$ $\neg IW \vee UL$ $\neg UL \vee IW$

negation of query:

$\neg IW$

7

RESOLUTION

KB:

$H \Rightarrow IW$ $T \Rightarrow UL$ $H \Leftrightarrow \neg T$ $IW \Leftrightarrow UL$
 $\neg H \vee IW$ $\neg T \vee UL$ $T \vee H$ $\neg H \vee \neg T$ $\neg IW \vee UL$ $\neg UL \vee IW$

negation of query:

$\neg IW$

8

INFERENCE ALGORITHMS

Generally, four ways to check for entailment:

- Brute-force model checking
- Resolution
- Forward chaining
- Backward chaining

9

FORWARD CHAINING

- Instead of resolution, you can also use modus ponens to infer if a query is true
- Approach is called forward chaining.
- High-level idea:
 - Use modus ponens to add more and more clauses into the KB
 - If one of the clauses added is the query, then the query is entailed

10

FORWARD CHAINING

KB:

$H \Rightarrow IW$ $T \Rightarrow UL$ $H \Leftrightarrow \neg T$ $IW \Leftrightarrow UL$
 $\neg H \vee IW$ $\neg T \vee UL$ $T \vee H$ $\neg H \vee \neg T$ $\neg IW \vee UL$ $\neg UL \vee IW$

11

FORWARD CHAINING

KB:

$H \Rightarrow IW$ $T \Rightarrow UL$ $H \Leftrightarrow \neg T$ $IW \Leftrightarrow UL$
 $\neg H \vee IW$ $\neg T \vee UL$ $T \vee H$ $\neg H \vee \neg T$ $\neg IW \vee UL$ $\neg UL \vee IW$

```

graph TD
    KB1["H v IW"]
    KB2["T v UL"]
    KB3["T v H"]
    KB4["H v ~T"]
    KB5["~IW v UL"]
    KB6["~UL v IW"]
    
    ULvH["UL v H"]
    UL["UL"]
    IW["IW"]
    
    KB1 --> ULvH
    KB2 --> ULvH
    KB3 --> ULvH
    KB4 --> ULvH
    KB5 --> ULvH
    KB6 --> ULvH
    
    ULvH --> UL
    KB4 --> UL
    KB6 --> UL
    
    UL --> IW
    KB6 --> IW
    
```

12

EXERCISE

- If the unicorn is mythical, then it is immortal, but if it is not mythical, then it is a mortal mammal. If the unicorn is either immortal or a mammal, then it is horned. The unicorn is magical if it is horned.
- Prove that the unicorn is magical using resolution and forward chaining
